1PLACE CLOUD AUTOMATION
LAMP STACK MULTI-REGION & MULTI-NODE BUILDS

Deploy a complete Cloud hosted LAMP Stack in minutes with 1Place

What is 1Place for LAMP-stack

1Place for Lamp Stack helps users to install and deploy LAMP stack (Linux operating system, Apache HTTP Server, MySQL relational database management system and PHP programming language) in one or more servers at the same time. It is an easy-to-use automation tool that will help you get your LAMP stack up and running in minutes.

Users can register multiple servers and nodes using 1Place. Through the 1Place LAMP stack interface a user can select one or more servers, to deploy the LAMP stack to. Once the user chooses the servers under each software list, they can submit to install. 1Place LAMP Stack also provides features such as monitoring, configuring and management of the LAMP stack after installation.

What are the features of 1Place for LAMP-stack

1Place for LAMP-stack helps you to set up a LAMP stack on your cloud servers quickly and easily. The 1Place suite of automated LAMP provisioning software will help you in creating your server and installing all the necessary software even in multi-location and dual-node configurations for higher availability and resilience.

The features of the 1Place LAMP suite include:

- **Single View Dashboard with point and click automation for ultra-fast installs**
- **Installation of LAMP on one or more servers across multiple regions**
- **Monitoring the progress of each software installation in the servers selected.**
- **A view log and summary of the installation progress.**
- **Monitoring the Linux resource usage, Apache process and MySQL database**
- **Configuring the installed software on each server.**
- **Managing the installed software on each server through actions such as Reload, Restart, Start, Stop, Status etc.**

How is 1Place for LAMP-stack licensed?

1Place for LAMP Stack, managed migration and monitoring can be delivered using the following models:

- Pay-by-the-hour (PBTH)
